* Classification of languages: Formal -
following are the main types of languages
used to write programs, with the
major ones being, Fortran - mathematical, Algol
languages: From first to last, Fortran, Algol, C, C++,
C#, Java, JavaScript, Perl, Python, PHP, Ruby,
Python, JavaScript, Java, C#, C++, C, Fortran,
and others. Scripting languages: Perl, Python, JavaScript,
PHP, Ruby, etc. Markup languages: HTML, XML,
CSS, etc. Domain specific languages: Prolog, Lisp,
Scheme, etc. Query languages: SQL, etc.
The main difference between formal and scripting
languages is that formal languages are used to
write programs that run on a computer, while
scripting languages are used to write programs
that run on a computer but are not compiled.
Formal languages are used to write programs
that run on a computer, while scripting
